

SYNOPTIC SITUATION: The High pressure from Africa, responsible for the ongoing heat wave, will move its main axis to France between Friday and Saturday, permitting, after the warmest peak of Thursday (+10/+12°C above the average), a significant fall in temperatures due to less warm air flow from North and North-East, even if with values still above the seasonal average. On Sunday the main High pressure axis will shift to East directly interesting the Alps, keeping temperatures above the seasonal average.

Sea surface prognostic chart for 12 GMT of Friday 28th June 2019

Today: Sunny weather, with weak growth of cumulus clouds, which will slightly limit the sunshine, with very low chance of some isolated shower or heat thunderstorm in the afternoon/evening (10/30%). Hot will have its peak, with maximum daily value 31/32°C in Cortina. Moderate/fresh Northerly top mountain winds, breezes in the valley.

WEATHER FORECAST

FRIDAY 28: Mostly sunny weather, with weak growth of diurnal cumulus clouds, but with quite absent chance of some isolated showers or heat thunderstorms in the afternoon/evening (0/20%). Still above the seasonal average temperatures, even if falling compared to Thursday's values.

Temperatures: Stationary the Low in the valley, falling aloft in the evening; falling the High ones. At 1500 m: min 17 °C max 25°C; at 2200 m: min 12°C max 17°C.

Wind: In the valley light/moderate due to breezes; top mountains Northerly moderate/fresh winds, 15-30 km/h at 2000 m, 25-45 km/h at 3000 m.

Friday 28
Confidence: good

SATURDAY 29: Mostly sunny weather, with clear or scattered sky due to possible low clouds patches in the night and early in the morning and due to weak cumulus clouds in the day, without any precipitation. Still warm diurnal climate even if with further fall in temperatures.

Temperatures: Falling. At 1500 m: min 16 °C max 22°C; at 2200 m: min 11°C max 16°C.

Wind: In the valley light/moderate due to breezes; top mountains Northerly light/moderate winds, 5-15 km/h at 2000 m, 10-25 km/h at 3000 m.

Saturday 29
Confidence: good

TREND

SUNDAY 30: Mostly sunny weather, very warm and settled, even if a wider cumuliform cloudiness will be possible in the day, with very low chance of isolated shower or heat thunderstorm in the afternoon/evening. Newly slightly rising diurnal temperatures. Light winds everywhere.

Forecaster: G.M.
